DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-13 and 21 rejected under 35 U.S.C. 102(e) as being anticipated by Sung (U.S. 6,184,945). Sung discloses a liquid crystal display wherein an electrode film forming a capacitor in cooperation with the pixel electrode is connected to the gate wiring via a connecting path. Note the following elements in figures 4 and 5: source electrode 85, electrode film 103 forming a capacitor with pixel electrode 88, insulating layers 92 and 100, and connecting path 107 for connecting gate line 86 to the electrode film 103. See columns 8 and 9 of the specification. Sung teaches that the source

electrodes, source wires, drain electrodes, and capacitive electrodes are patterned from the same conductive metal film using the same mask. See column 10, lines 12 – 30.

Claims 14-20 and 22 rejected under 35 U.S.C. 102(e) as being anticipated by Sung (U.S. 6,184,945). Sung discloses a liquid crystal display wherein an electrode film forming a capacitor in cooperation with the pixel electrode is connected to the gate wiring via a connecting path. Note the third embodiment shown in figures 4 and 5 and the method of fabrication disclosed in column 10, lines 4 – 59.

Response to Arguments

Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.
